EDUOS

Find the gap. Fix it. Prove it. Earn from it.

An AI-native operating system for free IT training institutes, built for Bano Qabil and running on Alibaba Cloud Model Studio.

Q1 · the problem and who faces it

A trainer, a batch of 100, a pile of paper — and a total that hides the gap.

1.6M+

registered learners at Bano Qabil, 70 cities, ~40% women

31/50

is all a marked paper says. Not *which concept* each student is missing.

10–12%

of Pakistani IT graduates are job-ready on day one (PBC). Free certificates aren't trusted.

Sources: Bano Qabil · Pakistan Business Council · P@SHA

Q3 · one concept, start to result

One gap, followed across three people.

01	02	03	04	05	06	07
Photograph the answer sheet	**Per-question marks, trainer confirms**	**Re-teach groups by concept**	**Targeted practice, in Urdu**	**Viva → Passport Verified**	**First gig + proposal from real evidence**	**Institute-wide gap map**
TRAINER	TRAINER	TRAINER	STUDENT	STUDENT	STUDENT	MANAGEMENT
qwen3-vl-plus	human in the loop	gap engine	qwen-plus · qwen-mt	adaptive qwen-plus	grounded output	tenant-isolated

Live in the demo: a real handwritten sheet → Ali Hassan's new gap → his viva → his first gig → the director's map.

Q2 · why it has to be built for Pakistan

Design choices you can see on screen.

Paper first

Classes run on paper. EDUOS reads handwritten sheets from a phone photo — students need no device at all.

Urdu, the way we teach

Qwen-MT translates to Urdu while a glossary keeps **`Python · set · loop`** in English.

آپ کا سب سے کمزور تصور Python میں loops ہے۔

Low bandwidth, low cost

Photos shrink on the phone before upload. Marking one answer sheet costs about **Rs 0.23**, measured.

Measured on Alibaba Model Studio (Singapore), qwen3-vl-plus, 1,696 tokens per sheet

Q5 · what the AI does, and why it's needed

Three Qwen models, each doing work rules can't.

MODEL (MODEL STUDIO)	JOB	GUARDRAIL
`qwen3-vl-plus`	Reads handwriting, marks each answer against the key with a reason	Trainer confirms every mark; handwriting is treated as data, never instructions
`qwen-plus`	Targeted practice · adaptive viva · gig proposal · copilot · command center	Numbers checked by the grounding guard; tool calls over a 17-tool allowlist, no NL→SQL
`qwen-mt-flash`	Urdu explanations with an English technical glossary	Translation runs after the guard, so meaning is checked first

If the model is down, every screen completes on a labelled computed fallback — and a viva can never be "Verified" without Qwen.

Q7 · what's new

Others stop at the gap. EDUOS closes the loop.

	READS PAPER	FINDS CONCEPT GAPS	FIXES + RE-TEACHES	VERIFIES THE SKILL	LEADS TO EARNING
Google Classroom · Moodle	—	—	—	—	—
AI tutor chatbots	—	partly	student only	—	—
ClassMind (Alibaba Abu Dhabi winner)	✓	✓	—	—	—
EDUOS	✓	✓	✓ trainer + student	✓ viva	✓ first gig

Inside a multi-tenant institute OS, not a standalone tool

Q8 · who benefits first, and how it reaches more

One institute today. Every centre is a tenant.

FIRST

Bano Qabil trainers & students

The problem we demo is Shan's own classroom.

NEXT

Alibaba Cloud training centres

Being set up with Bano Qabil in Karachi and Lahore — exactly the institute EDUOS models.

THEN

Alkhidmat’s 99 skills centres

Tenant isolation is live and tested with two institutes: one database query layer, no cross-centre leaks.

Q9 · what it takes to keep running

Cost is measured, not guessed.

Rs 0.23

to read and mark one answer sheet (qwen3-vl-plus)

≈ Rs 9.5

per learner per month at 20 AI chats (qwen-plus); ~12× less on qwen3.7-flash

7.8×

faster end-to-end after we moved compute next to the data (380 s → 48 s)

System Health records every AI call's tokens and latency per request. Upkeep: one small team. Hosting move to Alibaba Cloud (Function Compute + ApsaraDB) is **planned**.

Prices: Model Studio Singapore list, Oct 2026 · PKR at 280/USD

Q10 · built versus planned

What you saw is built. What we haven’t built, we say.

BUILT · TESTED · LIVE

Gap Finder · Viva · First-Earning Copilot · Skill Passport

Multi-tenant isolation · System Health · security hardening

140+ unit tests · isolation, security and smoke suites

Live on Alibaba Model Studio AI

PLANNED · NOT CLAIMED

Hosting on Alibaba Cloud (AI already is)

Urdu speech — Alibaba ASR doesn't list Urdu yet

Urdu handwriting — not yet verified

Real placement data — demo data is synthetic
